(\*) these values may vary depending on environmental factors such as temperature, moisture, and type of substrates.

**Product description**

Antimoss is a cleaner that efficiently interacts with green deposit and ensures long aftereffects. Antimoss eliminates microorganisms such as moss and algae on most hard surfaces.

**Properties**

- Removes microorganisms
- Does not affect plantation.
- Long aftereffect

**Applications**

- Removal of moss and algae on concrete tiles, flat roofs, terraces, walls, ...

**Packaging**

*Colour:* colorless

*Packaging:* 1 L, 5 L, 10 L

**Application method**

For large horizontal surfaces the green deposits can be removed with undiluted product using a watering can and distribute it with brush or broom. Let Antimoss work for approx. 6 hours. The loosened moss can be wiped or rinsed away. Small or vertical surfaces: use a spray bottle. Spray on the green parts, let work for approx. 6 hours and wipe away the loosened moss.

**Health- and Safety Recommendations**

Do not collect rinsing water in drinking water tank or pond. Consult label for more information. For more information see Material Safety Data Sheet.

**Remarks**

- License No. 6997B

Remark: This technical data sheet replaces all previous versions. The directives contained in this documentation are the result of our experiments and of our experience and have been submitted in good faith. Because of the diversity of the materials and substrates and the great number of possible applications which are out of our control, we cannot accept any responsibility for the results obtained. Since the design, the quality of the substrate and processing conditions beyond our control, no liability under this publication is accepted. In every case it is recommended to carry out preliminary experiments. Soudal reserves the right to modify products without prior notice.
